

Day 1 of training

Start with html

1. Basic introduction about html why we need to use html
2. Some tags and attributes of html

E.g. -> paragraph tag, anchor tag, image tag etc.

->Homework use these tags yourself and make some experiments on these tags

1 **paragraph tag** -> . in these use (Lorem)-> which is used to generate random line of code show in (fig 1.1)

2) **heading tags** -> use 6 different heading tags

-> defines heading in a document

->Range from <H1> to <H6>

3) **
 tag** -> It is used for new line in html

4) **image tage**

5) some text styling tags like :-

-> for bold ->

->Text style change->

Many more tags .

1 exercise :-> Use all the tags which I learn make a code using all these tags

—>Here we see all the tags which I learn in my code

BGCOLOR AND FONT TAGS :->

-> learn about background colour change ->bicolour tag

-> text colour change -> font tag

Note -> all these things we use in css its not html thing but it is for our knowledge

Again Some tags

<hr> Tag (Horizontal Rule)

- Used to draw a horizontal line across the web page.

- It is mainly used to separate sections or content.

It is an empty tag (no closing tag needed).

<marquee> Tag:

- It is used to make text or images move (scroll) on the web page.
- The content can scroll left, right, up, or down.
- It is a non-standard tag, so it's not recommended in modern websites (but still works in most browsers).

List tags :->

There are three list tags :->

1) ordered 2) unordered 3) description list

—> Tag (Ordered List):

—> unordered list

 Tag (Unordered List): Used to create a numbered list (1, 2, 3...).

Used to create a bulleted list (•)

Each item in the list goes inside the tag.
 tag.

Each item is written inside an

Description List (<dl>, <dt>, <dd>)

- Used to show terms and their descriptions — like a glossary or FAQ.
- Tags:
- <dl> – Description List (the container)
- <dt> – Description Term (like a title or word)
- <dd> – Description Data (explains the term)
